Cassandra Day 2022

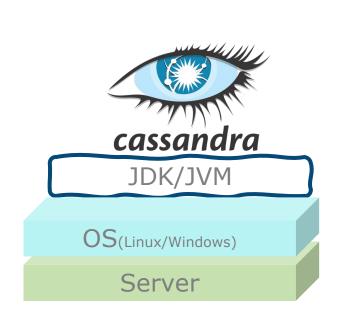

azul

Cassandra at Lightspeed

Michael Chong – Regional Sales Engineer, ASEAN

JVM Challenges in the Enterprise

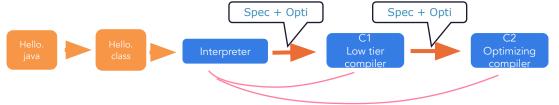

JVM Performance Challenges

Throughput

• Adaptive runtime JIT compilation:

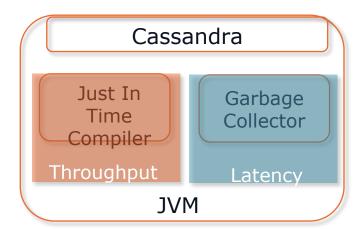

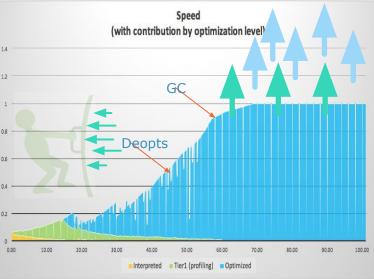

• Speculative Optimizations and De-optimizations

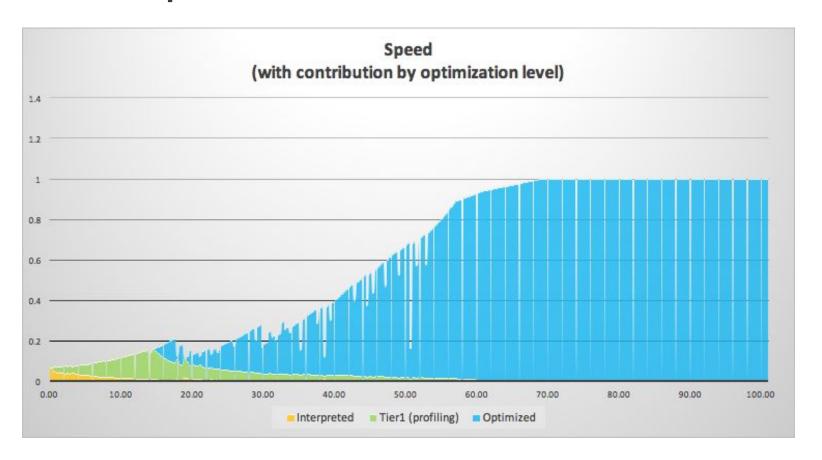

Latency

Biggest issue is Garbage Collection

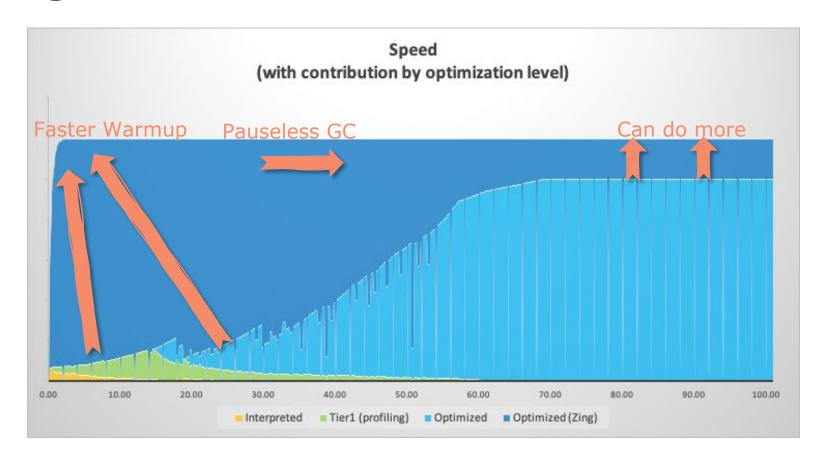

General Purpose JVM

Target

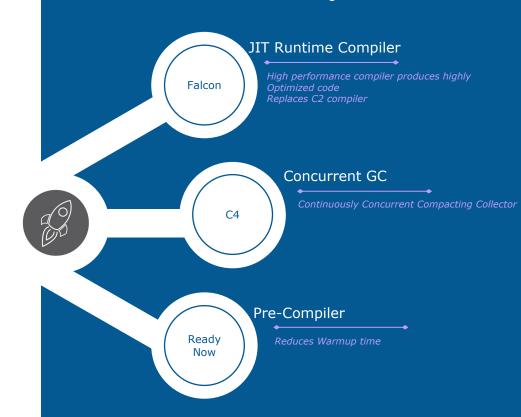

Prime: A Better JVM

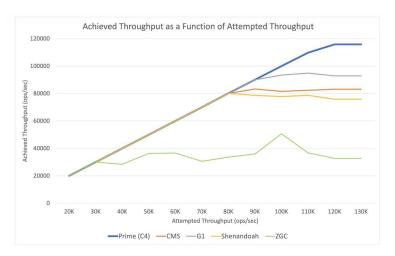

(formerly Zing)

- Based on OpenJDK
- TCK/JCK certified
- Drop-in replacement for other JVMs
 - No Code Changes required
 - No Recompiles required

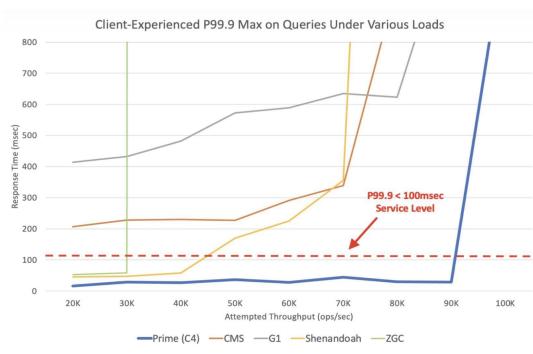

Starts fast, Goes fast, Stays fast!

Cassandra Performance on Prime

Configuration	Highest Achieved Throughput (ops/sec)
Azul Platform Prime 11	115,865
OpenJDK 11 CMS	83,305
OpenJDK 11 G1	94,850
OpenJDK 11 Shenandoah	80,085
OpenJDK 11 ZGC	50,630

https://www.azul.com/blog/cassandra-performance-throughout-responsiveness-capacity-and-cost/

Maximize Efficiency, Optimize Cost

Azul Platform Prime

Higher Volume Ingestion

45% more efficient Infra reduction for cloud savings Faster streaming for microservices

25% infra & 20% infra spend reduction

Azul Platform Prime

Infrastructure optimization

2-5x more efficient under load More efficient storage growth Cloud cost savings

• improve digital

5X Improvement in TPS, 20ms SLA

Transform Search Experience

1.5-5x more efficient under load

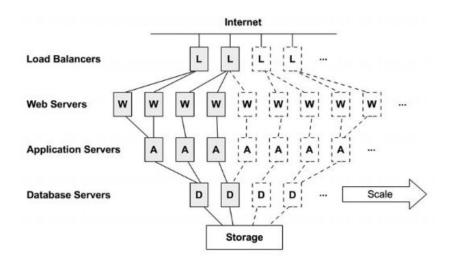

30% faster catalog, mktg search

147% TPS inc, 38% cloud spend reduction

Improve your Digital Transformation Projects; Allow you to grow with Confidence

Taboola

Taboola Powers Its Discovery & Ad Content to 1.4B People Each Montl

Reduces server footprint by 30-50% and achieves unprecedented performance, stability & security.

Taboola: 30 Billion Recommendations Daily

An epic shift is underway in the world of Java which has forced thousands of companies to make a choice: stay with Oracle or switch? It's a critical choice because it greatly impacts both the cost and performance of any company's Java infrastructure.

Taboola is one such company that faced this choice. Taboola's content discovery platform engages customers with precision-customized content. Ariel Pisetzky, as Vice President of IT, is responsible for Taboola's technical infrastructure that handles 1.4 million queries per second and serves 30 billion recommendations daily to 1.4 billion unique monthly users.

"The server would stop responding for 15 full minutes."

Benefits of Cassandra on Prime

Raw Performance

- Real-time requirement demands fast execution
- From machine scale to human scale, Prime delivers

Unmatched Reliability

- Eliminates disruptions, glitches and pauses
- Better customer experience = more revenue

Meet your SLA

- Meet your Competitive and Time-to-Market Challenges
- Meet all your Cassandra service delivery standards

Value

- Gain efficiency without incurring cost of additional nodes
- Maximize infrastructure utilization = Operational and capital efficiency

Fast Facts: Select Azul Customers in Asia Pacific

Some Global Azul Customers

Cassandra Day 2022

Thank You.

Tab **20**la

Millions of dollars in savings.

"With Azul Platform Prime, we were able to reduce our front-end server footprint by more that 30%, which is hundreds of servers, and our database server footprint by about 50%. This translates into millions of dollars in savings, both hardware we freed up and hosting costs avoided."

Ariel Pizetsky,
VP of IT

5x more infrastructure without Azul Platform Prime.

"Without Azul Platform Prime, we would be running 5 times more infrastructure than we are currently running now.

Azul has allowed us to *only* focus on our applications, new features and new roadmap items."

Cody Bayer,
DevOps Engineer

Reduced Number of Servers by 80% and Eliminated Troubleshooting Time.

"With Azul Platform Prime, we minimize infrastructure overheads, maximize performance, and, best of all, my engineers are free to focus on feature development, not performance, tuning and troubleshooting."

- Brett Vasconcellos, CTO
